Management Discussion of Fund Performance

Investment Objective and Strategies

The investment objective of the Mawer Emerging Markets Equity Fund (the "Fund") is to achieve above-average, long-term, risk-adjusted returns by investing primarily in equity and equity related securities of companies located or active in emerging market countries. Treasury bills or short-term investments, not exceeding three years to maturity, may also be used from time to time.

The fundamental investment objectives of the Fund may only be changed with the approval of at least a majority of the votes cast at a meeting of unitholders duly called to consider the matter. However, we may change the Fund's investment strategies described below at our discretion.

Risk

This Fund is suitable for investors seeking long-term growth and who have a high tolerance for risk. General risks of investing in this Fund are outlined in the Prospectus and include the possibility of reduction in value of any given investment, liquidity risk, interest rate risk and currency risk amongst others.

The Manager attempts to reduce the exposure to these risks by not concentrating more than 20% of the net assets of the Fund in a particular Industry as defined by the Global Industry Classification Standards (GICS). It is also the Manager's policy to have no more than 10% of the net assets in any one common share of a corporation, at the time of purchase. It is the Manager's intention to be generally fully invested (less than 10% in cash).

The Fund was invested in seven of the eleven GICS sectors as of June 30, 2017. The Fund's largest sector weightings were in Information Technology (22%), Financials (17%) and Consumer Discretionary (16%). Combined, the weight in the three largest sectors represented 55% of the portfolio. In aggregate, the ten largest individual holdings accounted for 37% of the portfolio.

Results of Operations

The Fund was made available to investors on January 31, 2017. Net assets at the end of the period totaled \$35.5 million. Over the period, net investment performance contributed \$1.8 million while net contributions contributed \$33.6 million.

Since inception, the Fund's A series returned 11.5% (after management fees) which underperformed the MSCI Emerging Markets Total Return Index's return of 11.9%. All performance values provided are in Canadian dollar terms. Relative performance was driven by the Fund's cash allocation over the period. As equities appreciated, the Fund's cash allocation detracted significantly from performance.

Recent Developments

Two prominent themes over the period were inflation expectations and the monetary environment. Inflation expectations tempered during the second quarter, driven by an erosion of confidence in the viability (i.e., probability of passing) of Trump's more pro-growth policies. Meanwhile, investors received further signals that leading central banks are setting a course for less accommodative monetary policy going forward. In late June, the European Central Bank, Bank of England, and Bank of Canada all indicated that special measures in effect since 2015 will be coming to an end. This translated into a bump up in yields and strengthening currencies in these markets. Furthermore, the U.S. Federal Reserve announced an increase in the target federal funds rate of 0.25%.

China continued to balance the need to address risks in its financial system with the goal of positioning itself as the new world leader. Over the most recent quarter, China's banking regulator cracked down on "entrusted investments" or funds that Chinese banks farm out to external asset managers. Notably, Moody's also downgraded China from Aa3 to A1, warning of Beijing's financial strength and rising liabilities. Meanwhile, China stepped forward while the U.S. has backed out of the Paris Climate Agreement. China has also been investing heavily in infrastructure in Asia and has been busy making trade deals.

Going forward, we remain sensitive to the tepid growth outlook for the world economy and its influence on equity markets. As such, our approach to portfolio construction remains the same; we continue to emphasize high-quality companies with strong competitive advantages, solid balance sheets and business models that generate stable cash flows

Related Party Transactions – Management Fees

As Portfolio Advisors to the Fund, Mawer Investment Management Ltd. ("Mawer") receives management fees which are calculated for Series A units as 1.30% per annum of the net asset value of the Fund calculated on a daily basis. Management fees for Series O units are payable directly to the Manager by Series O investors and not by the Fund.

The terms of the Management Agreement were amended January 4, 1994, to grant the Manager of the Fund the ability, at

Mawer Emerging Markets Equity Fund

their discretion, to reduce the management fees for large investors. This reduction is effected by means of a management fee distribution and will be automatically reinvested in additional units of the Fund at the net asset value of the Fund on the date of distribution. Mawer also receives fees for performing administrative services. As at June 30, 2017 the Fund owes Mawer \$84 related to these administrative services.

(1) This information is for the period ended June 30, 2017 and December 31 of any other period(s) shown.

(2) Management expense ratio is based on total expenses for the stated year and is expressed as an annualized percentage of daily average net assets during the period. The Manager, at its discretion, absorbed certain expenses otherwise payable by each Series. The Manager may change the amount absorbed or discontinue absorbing these expenses at any time without notice.

(3) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the year. The higher a fund's portfolio turnover rate in a year, the greater the trading costs payable by the Fund in the year, and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of a fund.

(4) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period.

Past Performance

Sales commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the Prospectus before investing. The indicated rates of return are the historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any investor that would have reduced returns. Mutual funds are not guaranteed. Their value changes frequently and past performance may not be repeated.

The Fund's performance numbers assume that all distributions are reinvested in additional units of the Fund. If you hold this Fund outside of a registered plan, income and capital gains distributions that are paid to you increase your income for tax purposes whether paid to you in cash or reinvested in additional units. The amount of the reinvested taxable distributions is added to the adjusted cost base of the units that you own. This would decrease your capital gains or increase your capital loss when you later redeem from the Fund, thereby ensuring that you are not taxed on this amount again. Please consult your tax advisor regarding your personal tax situation.
